

IN THE SPECIFICATION:

On Page 15, please amend the paragraph beginning on line 1 as follows:

More particularly, when a window is opened a window manager program typically generates a frame around the window that includes a title bar. As described previously the window is often opened exhibiting a default size referred to as the restored size. In addition, as explained previously, the window frame is often designed so as to attract the attention of the user to the window. The window frame is one example of the aforementioned peripheral GUI elements. An example of a viewing space 400 of a computing device's display screen with such a window 402 displayed, is shown in Fig. 4. In this example, the window 402 is shown in its default or restored size in the middle of the viewing space 400. As can be seen the window 402 takes up much less than the entire viewing area available. In the example shown in Fig. 4, the viewing space 400 surrounding the window is dominated by a landscape scene that appears to the user as if he or she is looking out over a field toward the horizon. In this example, the window 402 is the default window displayed when Microsoft Corporation's Paint™ drawing tool program is first activated. Note that the window 402 is surrounded by a frame 404, including a title bar 406 that features an appearance which looks like it is made of glass. This appearance and the details of how it is generated are the subject of a co-pending U.S. patent application entitled "COMPOSITING DESKTOP WINDOW MANAGER", which was filed on October 23, 2003 and assigned ~~Serial Number _____~~ Serial Number 10/691,450. The subject matter of this co-pending application is hereby incorporated by reference.
